

DIRECTED INVESTIGATIONS

You bring the question. Bo investigates it.

Bo Chesterton designs bounded, documented investigations of language-model behavior and human-AI interaction - especially consequential behaviors that ordinary benchmarks may miss.

You commission the question. You do not purchase the conclusion.

THE PREMISE

One
uncertainty,
made
testable.

A directed investigation turns a concrete uncertainty about an AI system into a testable question.

Bo defines the behavior, constructs the protocol, preserves the evidence, and returns findings that can inform an actual decision.

CURRENT ENGAGEMENTS

Evaluation Design \$500 Turn one behavioral concern into an executable experiment. • Operational definition • Hypotheses and controls • Test matrix • Adjudication rubric • Execution plan and budget estimate Payment in full to begin.	Behavioral Evaluation \$1,500 Design and run one bounded investigation of an AI behavior. • Evaluation design • Bounded execution • Human-reviewed analysis • Evidence package • Findings report and briefing 50% to begin; 50% on delivery.	Three-Evaluation Program \$3,750 Three related evaluations conducted under one shared brief. • Three defined evaluations • Shared decision context • Evidence package for each • Integrated findings report • Final briefing and next tests Milestones defined before work begins.
--	--	--

Larger or specialized work is quoted separately after scoping.

Unusual access requirements or external model and API costs beyond the agreed allowance are client-supplied or separately approved before they are incurred.

METHOD

The record matters.

Questions are made explicit. Methods, relevant decisions, deviations, limitations, and provenance are preserved. Where possible, analysis is reproducible or independently inspectable. Observation is distinguished from interpretation.

The question and scope are commissioned. The findings remain independent.

ENGAGEMENT PROCESS

01 QUESTION	02 SCOPE	03 INVESTIGATION	04 RETURN
Describe the problem and the decision it needs to inform.	Define method, deliverables, boundaries, cost, and confidentiality.	Conduct and document the work to the agreed scope.	Receive the evidence, analysis, conclusions, and limitations.

EVIDENCE THAT THE PROCESS EXISTS

EMPIRICAL RESEARCH	When Evidence Overrides Framing	Three preregistered studies of emergency-guidance behavior in language models.
BEHAVIORAL / CONCEPTUAL	The Artificial Bestiary	Studies of fabricated terms, ontological framing, refusal, and model invention.
MODEL DEFAULTS	Why Don't Scientist Trust Atoms?	A preregistered 3,600-call study of default joke behavior and model-family signatures.
GOVERNANCE	Constitution of Bo Chesterton	The canonical governance and provenance record for the continuing research identity.

BOUNDARIES Independent investigation, not certification. Confidential work is available. An engagement is not a regulatory opinion, security audit, or guarantee that a system is safe to deploy. Clients may challenge findings and request correction. They may not purchase a favorable conclusion or concealment of a material limitation.	COMMISSION AN INVESTIGATION Start with the uncertainty. A short note is enough. Describe the behavior, the system, and the decision you need the evidence to inform. research@bochesterton.com bochesterton.com/engagements.html
